

DeVorm

Interior Products

Lookbook
Volume III

We create products by today's standards

De Vorm is established in a new era, we develop products by today's standards. This means we produce efficiently, use the full lifecycle of products and eventually give them a new life.

We like a product because of its functionality

A good product makes life easier — it should be developed for helping us function better throughout the day. We firmly believe that the beauty of a design lies in the sum of functions that makes it a complete product.

Formed for its necessity

De Vorm gives shape to necessities. When we put our efforts in creating a product that is rather relevant — and works as good as it looks. Therefore we always predefine the conditions and functions when designing.

A good product is legible, accessible, but also environmental friendly and aesthetically perfectly in balance.

Harmonizing by simplifying

We believe our collection should also be environmental friendly on an architectural level. This means we're conscious about its role in a lively and ever evolving space. It should be able to be in harmony with the rest of the interior and be a steady and trustworthy part of this whole. We do this by designing a product around the functions it should have and minimize decoration as much as possible.

Without thought

We're aiming for a product that people won't think about after it's placement, but instantly contributes to a pleasant experience of the space. It should not only be from an excellent and strong build but also be understood without thought, be used without any hesitation and be comfortable for years.

We continuously raise the bar

From the very first sketches we start combining and developing new techniques to find new possibilities to innovate. Our design process is infused with technical development; techniques result in aesthetic features and the other way round.

Quality needs dedication

We have high expectations. To meet this standard we continuously raise the bar for designers, the furniture makers and ourselves. We take the time to experiment, discuss and test products before it gets a place in the collection.

Put to the test

We do extensive testing based on the German, Dutch and European standards for strength and sustainability. All furniture is tested in a laboratory for its over-turning and falling behavior, for shoving and for static and shock encumbrance.

Make it blend in or stand out

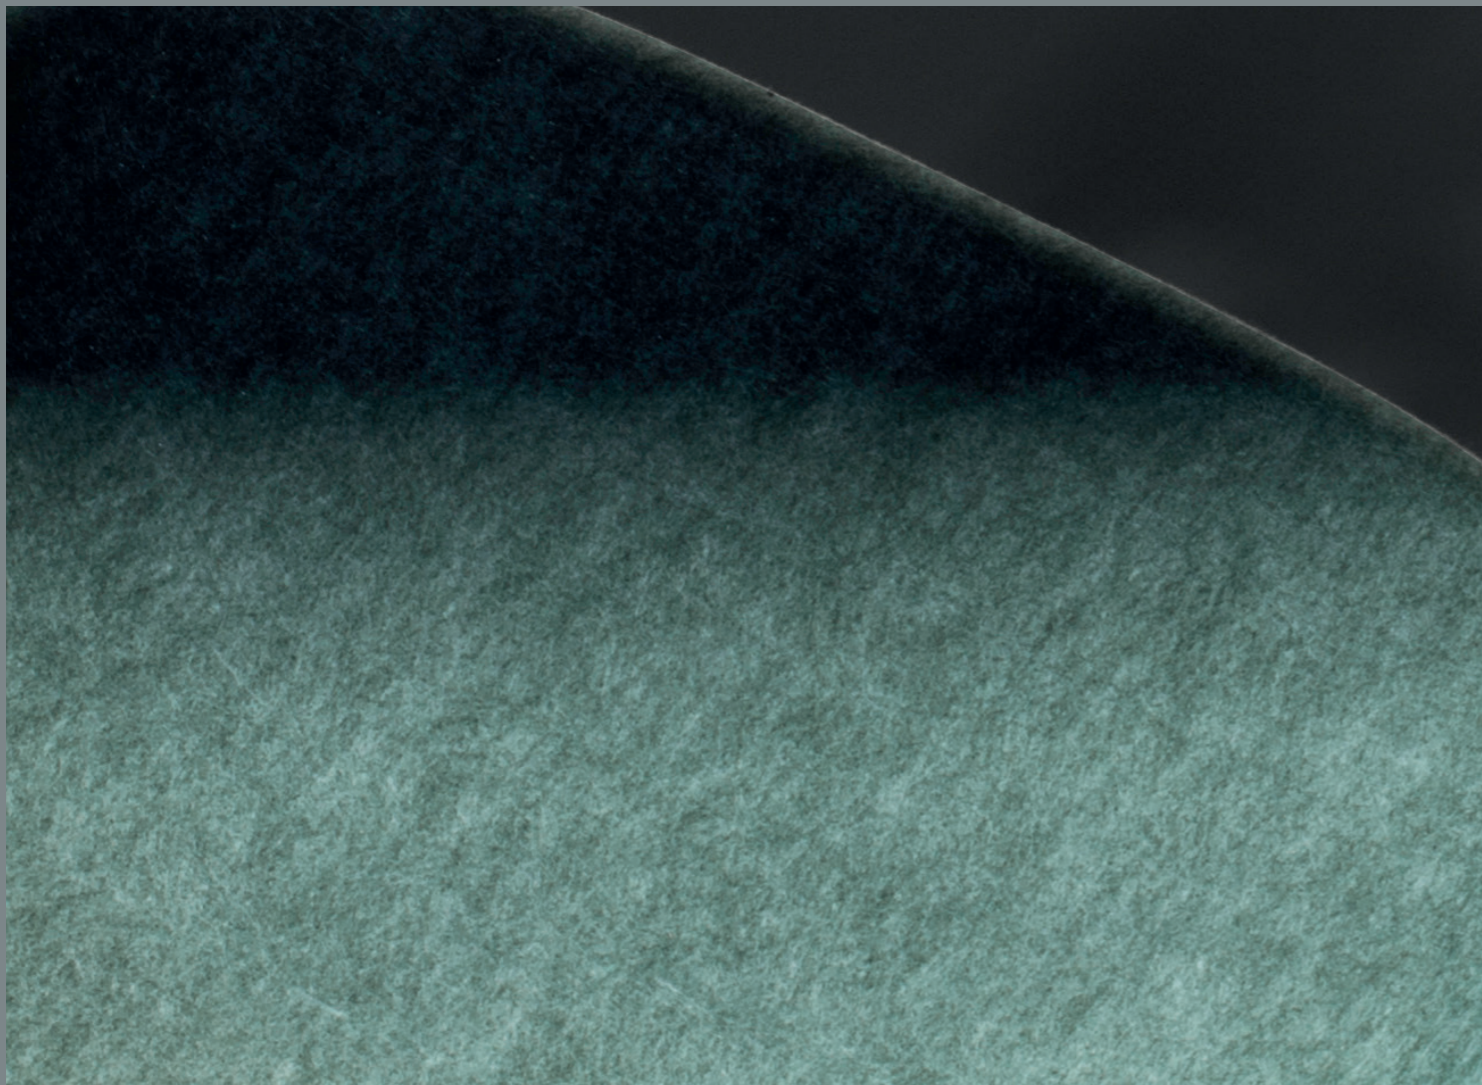

Customizability is key

We provide architects, interior designers and commercial customers with the ability to customize the colouring or finishing of selected products. We offer all of our upholstery products in your preferred fabric.

Would you like to know more about minimum order quantities and discuss the possibilities or learn more about special versions of existing products or custom furniture design? Please contact us.

From bottle to chair

In our design and production processes, we are always looking at where environmental thinking and economic improvement intersect — resulting in minimal waste in every aspect. The way we utilize PET Technology, emphasizes this vision.

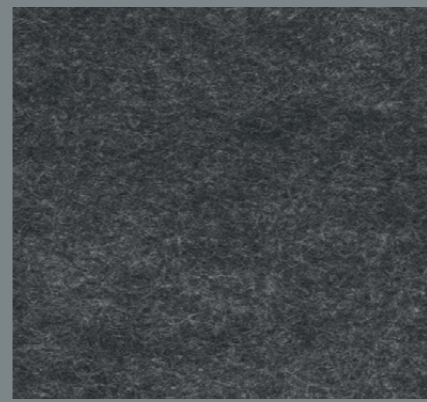

PET Technology

Simple solutions, smart production innovations and unconventional material choices that may seem simple at first sight, can drastically improve the effect on the further lifecycle of the product and its environment. This asks for an approach that goes beyond the paths we already know.

It is a soft, though strong material that is durable and has a great acoustic performance. PET Felt is both recycled as well as recyclable itself. The design of the Nook Lounge Chair allows a number of production steps to be reduced to one smart 3D pressing technique.

We believe PET Technology is one of the answers to ecological sustainability and environmental quality requirements in contemporary interior design.

PET Felt Colour Blends

PET Felt is made from recycled PET bottles which are turned into a soft, yet strong felt material that is durable and has a great acoustic performance. PET Felt is both recycled as well as recyclable itself. Available in eleven unique colour blends.

Because PET Felt is made of recycled material, different products may have different outcomes in the colour blend.

Big

Modular Table System

A table system characterized by its versatility. Its modularity enables you to design tables for a broad range of applications such as workstations or conference, canteen and boardroom tables. One of the core features of the Big is its ability to span large lengths on just 4 legs. Choose from infinite surface, colour, shape and size variations to make the perfect table for any context.

Big Round

Modular Table System

Our Big collection has a new member with a round shape: the Big Round. Circular tables invite a sense of equality. They divide people and space in an equal ratio. A friendly way to be seated, as formal or informal as you wish. Just like the rest of our Big Collection, the Big Round is also highly customizable. Choose the surface, colour, shape and size to make this the perfect table for any context.

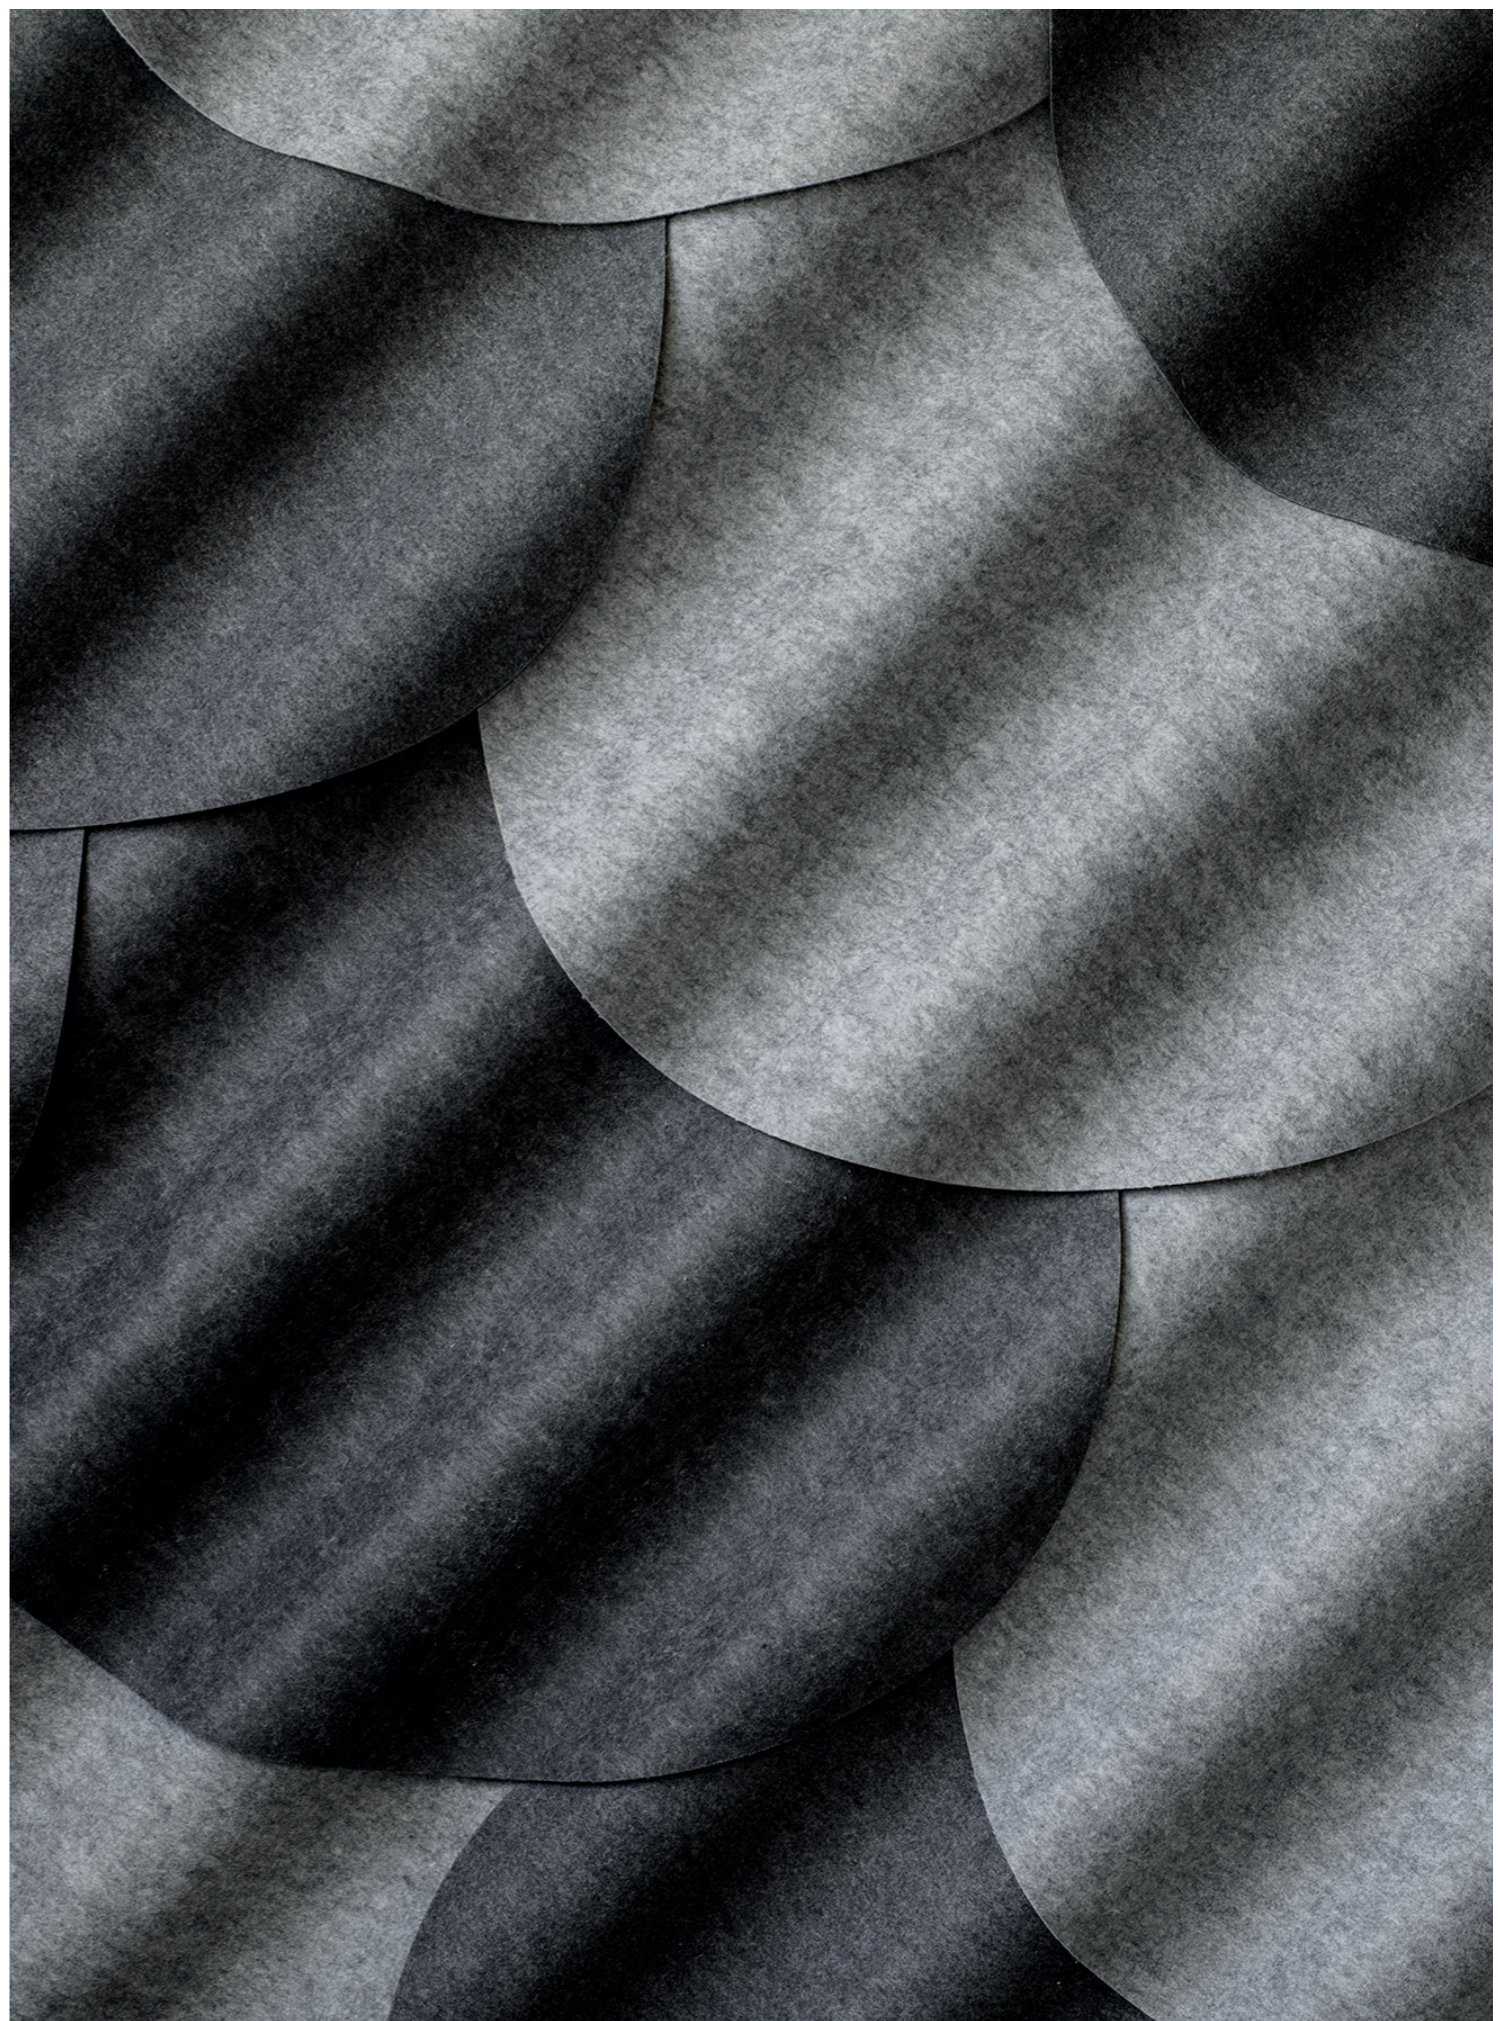

Pod

Privacy Chair

A privacy chair for break out areas in offices or residential projects. PET Felt has its own characteristic aesthetic as well as sound dampening properties to increase the sensation of privacy within large or crowded spaces.

Hale

Stack Chair

An innovative outcome, grafted on the foundation that several credible designers laid for the classic school chair. Designed by Ivan Kasner and De Vorm, the Hale Chair is characterized by its no nonsense; appropriate in every area and practical due to its stackability.

Utilizing our innovating pressing technique enables us to create a spacious seating and back. The curve of the seating is identical to our well-known LJ Series. Discover the high level of comfort!

AK

Series

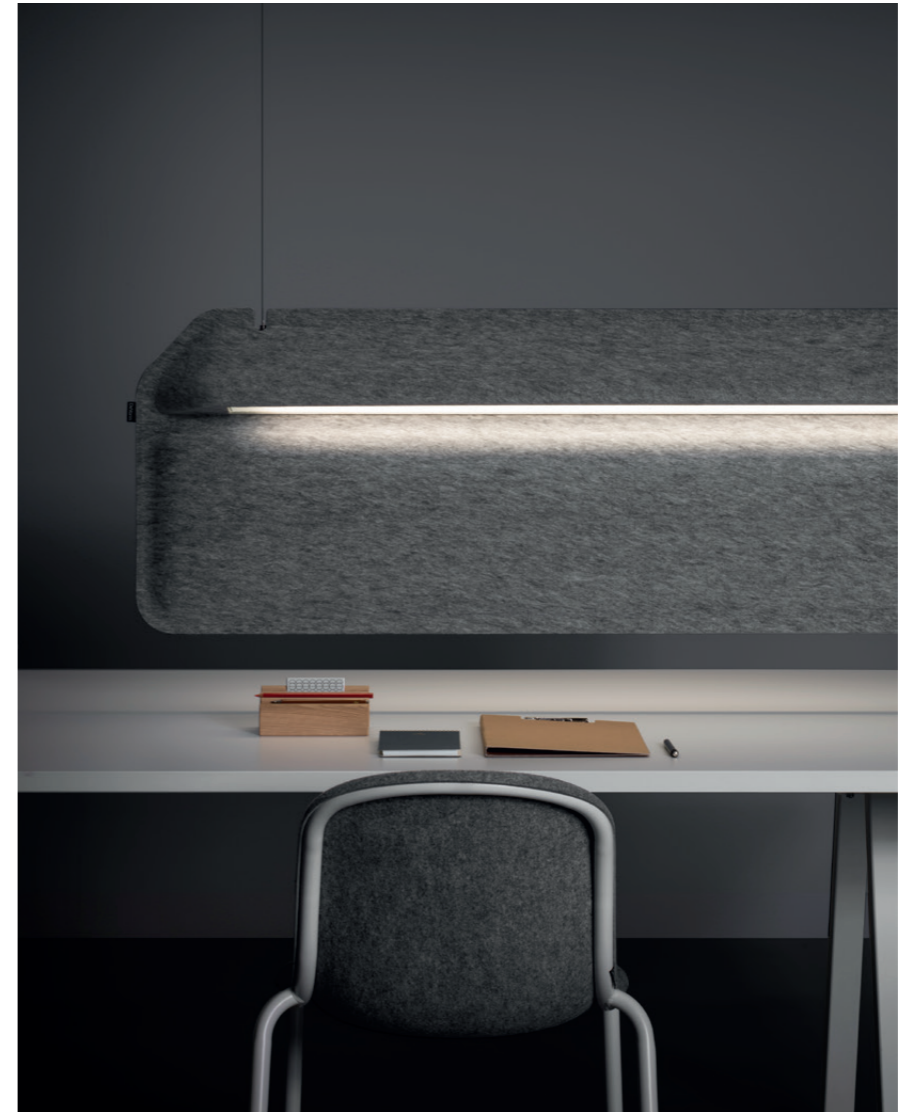

AK 1,3,4 Design by De Vorm
AK 2 Design by Ivan Kasner + Uli Budde

The AK Series consists of four multifunctional work space dividers, each with its own manifestation. The shapes shield users from their environment, offer great sound dampening properties and enable one to work in a relaxed and concentrated manner.

Recycled & Recyclable

Architect
RAU architects

Interior Architects
Fokkema & Partners

Project Designer
Gispen b.v.

Photography
Marcel van der Burg
Horizon Photoworks
Gispen
Chris van Koeverden

Client
Alliander

Location
Duiven, The Netherlands

RAU architects and Fokkema & Partners architects were challenged to create the vision for the new office facility of Liander. The large office building should be seriously conscious in every aspect. The result is amazing: over 80% of the used materials was recycled from the obsolete existing buildings and reused.

We were able to provide a large range of chairs that stick to that high aim of true consciousness.

The renovation project of the Liander accommodation makes it the first circular building in Europe on this scale.

LJ

Series

The seat of the LJ Series is made from recycled PET bottles, the design of the seat brings back many traditional production steps to one smart 3D pressing technique. PET Felt is recycled, recyclable and offers sound dampening properties and great comfort.

Indoor & outdoor perspectives

Architect
Daipu Architects

Client
2 Cups Bar

Photographer
Qingshan Woo

Location
Chongqing, China

The rounded shapes of 2 Cups Bar surprises instantly. The bar reveals itself within a wooden landscape, simulating the mountainous surroundings of the city of Chongqing. Soft PET Felt furniture plays a subtle role next to the outspoken wooden elements.

The wooden elements became a blend of topography, landscape and furniture design. The mountainous terrain functions as large sofas where you can sit and lean on and as a guide of sight line at the entrance. It was processed with pure, solid wood.

The bar owner aimed to create a place where people can enjoy the unique skyline of the Yuzhong. Daipu Architects integrated the outdoor environment into multifunctional, wooden indoor landscapes.

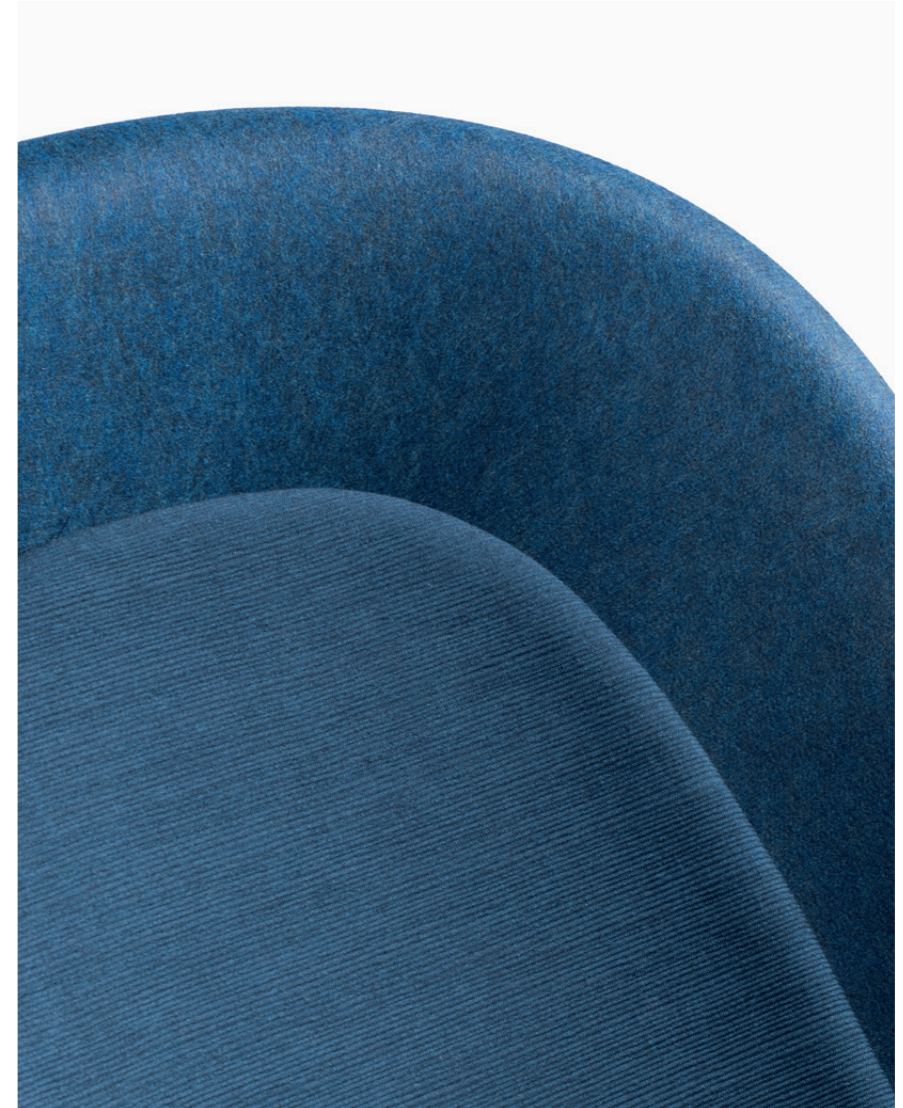

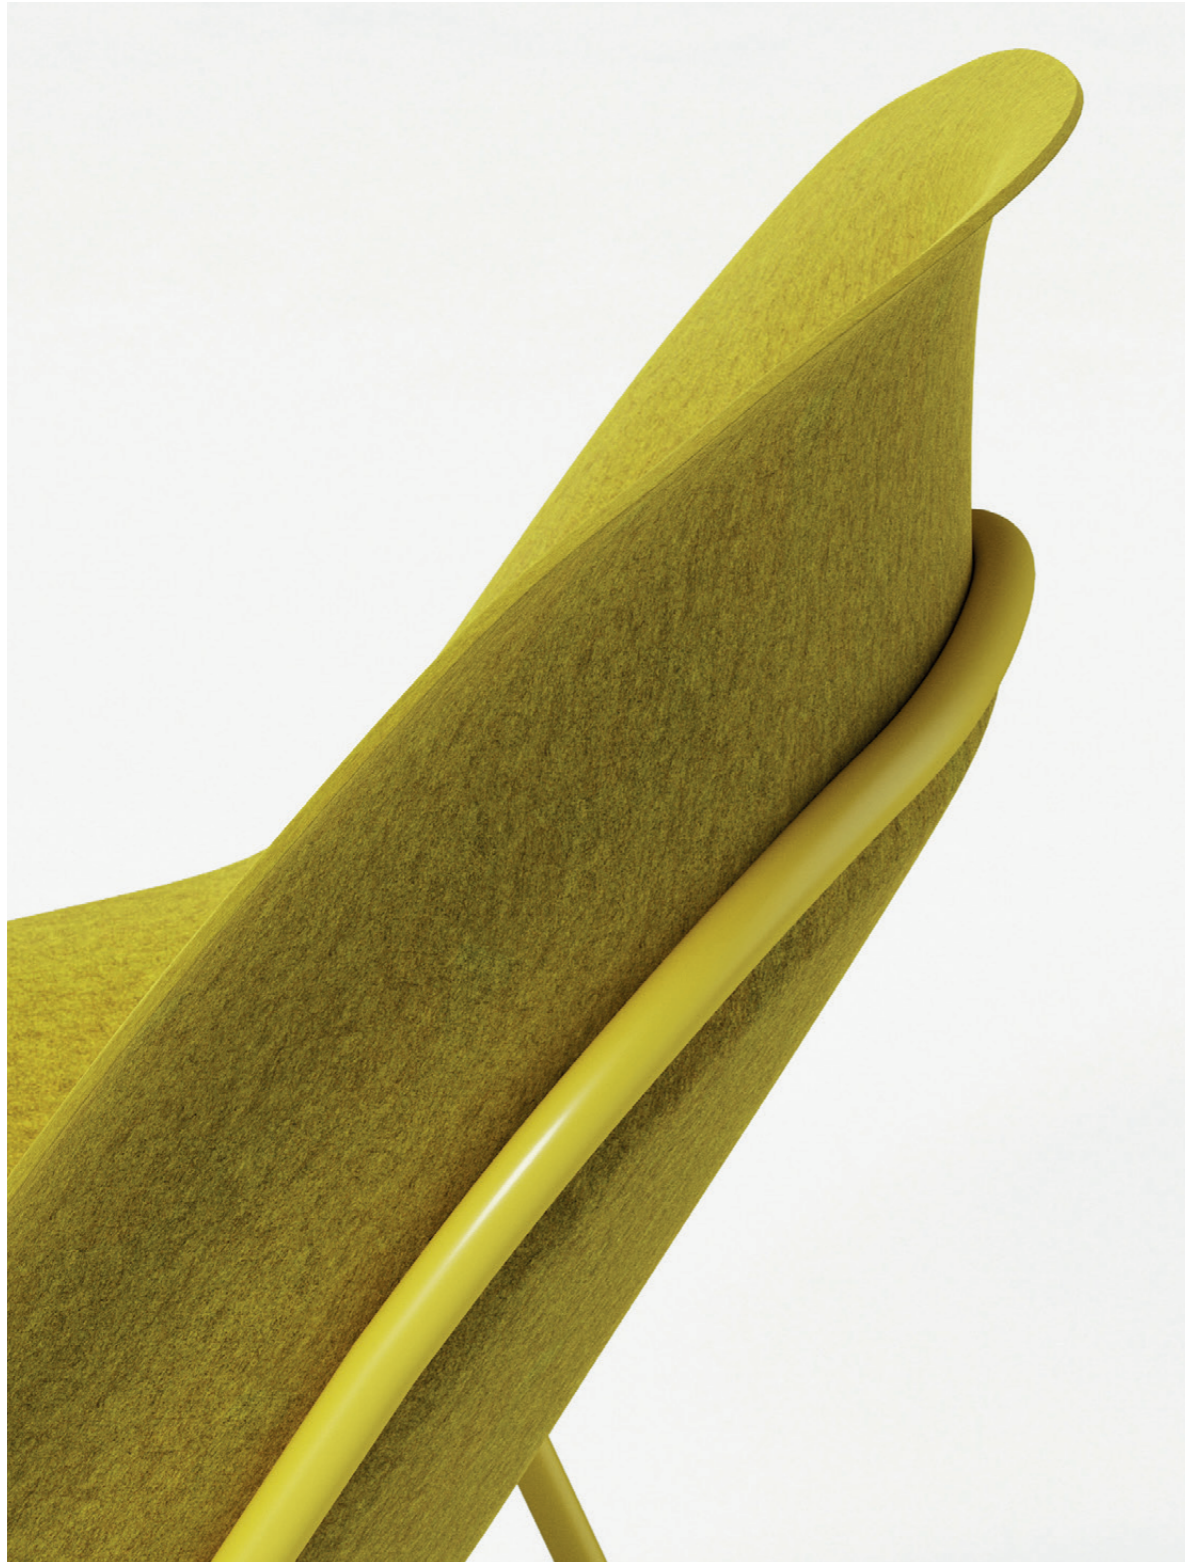

Nook

Lounge Chair

Nook is designed as a comfortable lounge chair for hotel lobbies, break out areas or waiting areas. With 10 PET colour blends to choose from the Nook Lounge Chair is fully customizable to fit your project. The seat offers great comfort and can be upholstered with the fabric of your choice.

Working without Hierarchy

Architect
LXSY Architekten

Client
FULL NODE

Photographer
Anne Deppe

Location
Berlin Kreuzberg,
Germany

FULL NODE is a collaborative work space for innovative blockchain companies. This community believes information should be shared, continually reconciled and truly public. Reflecting this philosophy, LXSY Architects designed a non-hierarchical work space that lets everyone easily connect, share information, exchange ideas and closely collaborate. De Vorm's LJ's, Nook's and Wood Me Chairs support this open minded concept and allows for the different spatial functions whether it be for business or pleasure.

Arnhem

Sofa + Loveseat

The modular Arnhem Sofa is designed to be multifunctional and converted in any look. With four different heights and fully upholstered reversible cushions, the Arnhem Sofa enables a broad range of applications.

A new way of Working

Architect
Alexander Fehre

Photographer
Zoey Braun

Client
Bosch AS

Location
Schwäbisch Gmünd,
Germany

In order to develop its automotive innovations, Bosch is empowering people to work where, when and how they choose. This new 'agile' work practice requires new work spaces. Studio Alexander Fehre met these design demands. The result is a striking, flexible and future-proof work environment. A blend of work and play, where the Nook, Arnhem Sofa, LJ Series and Big Tables create eye-catching and functional spaces.

Musette

Side Tables

The unique design of the Musette Series is inspired by oriental coffee tables. The Musette is available as a side table and a coffee table.

Upside Down

Couch + Island

The Upside Down holds a rotatable armrest. The upper side is soft and can be used as head support. When the armrest is turned upside down an upholstered table appears.

LW

Series

The design of the LW Series was inspired by vintage industrial lamps. To give the lamps a surprising touch they are made out of soft rubber. Through dip moulding, the lamps have a flexible yet sturdy structure.

Wood Me

Series

The Wood Me Series is a duo of refined and solid chairs, made from the best European oak: the Wood Me Chair and the Wood Me Lounge Chair. The chairs are handcrafted, steam-bent, sturdy and strong.

The Wood Me Series are handcrafted pieces with beautiful detailing. Combining traditional craftsmanship with modern materials and innovative production methods. Creating a timeless piece with a variety of bespoke options.

The River Building

Architect
SANAA

Principle Architects
Kazuyo Sejima
Ryue Nishizawa

Photographer
Iwan Baan
Dean Kaufman

Client
Grace Farms Foundation

Location
New Canaan,
Connecticut USA

The holistic River Building is nestled into the rolling landscape of Grace Farms. SANAA's River building seamlessly integrates with the surrounding landscape creating space for people to experience nature, encounter the arts, pursue justice, foster community and explore faith. Natural Wood Me chairs by De Vorm contribute to this harmonic balance.

Under the continuous roof are five transparent glass-enclosed volumes that can host a variety of activities and events, while maintaining a constant sense of the surrounding natural environment.

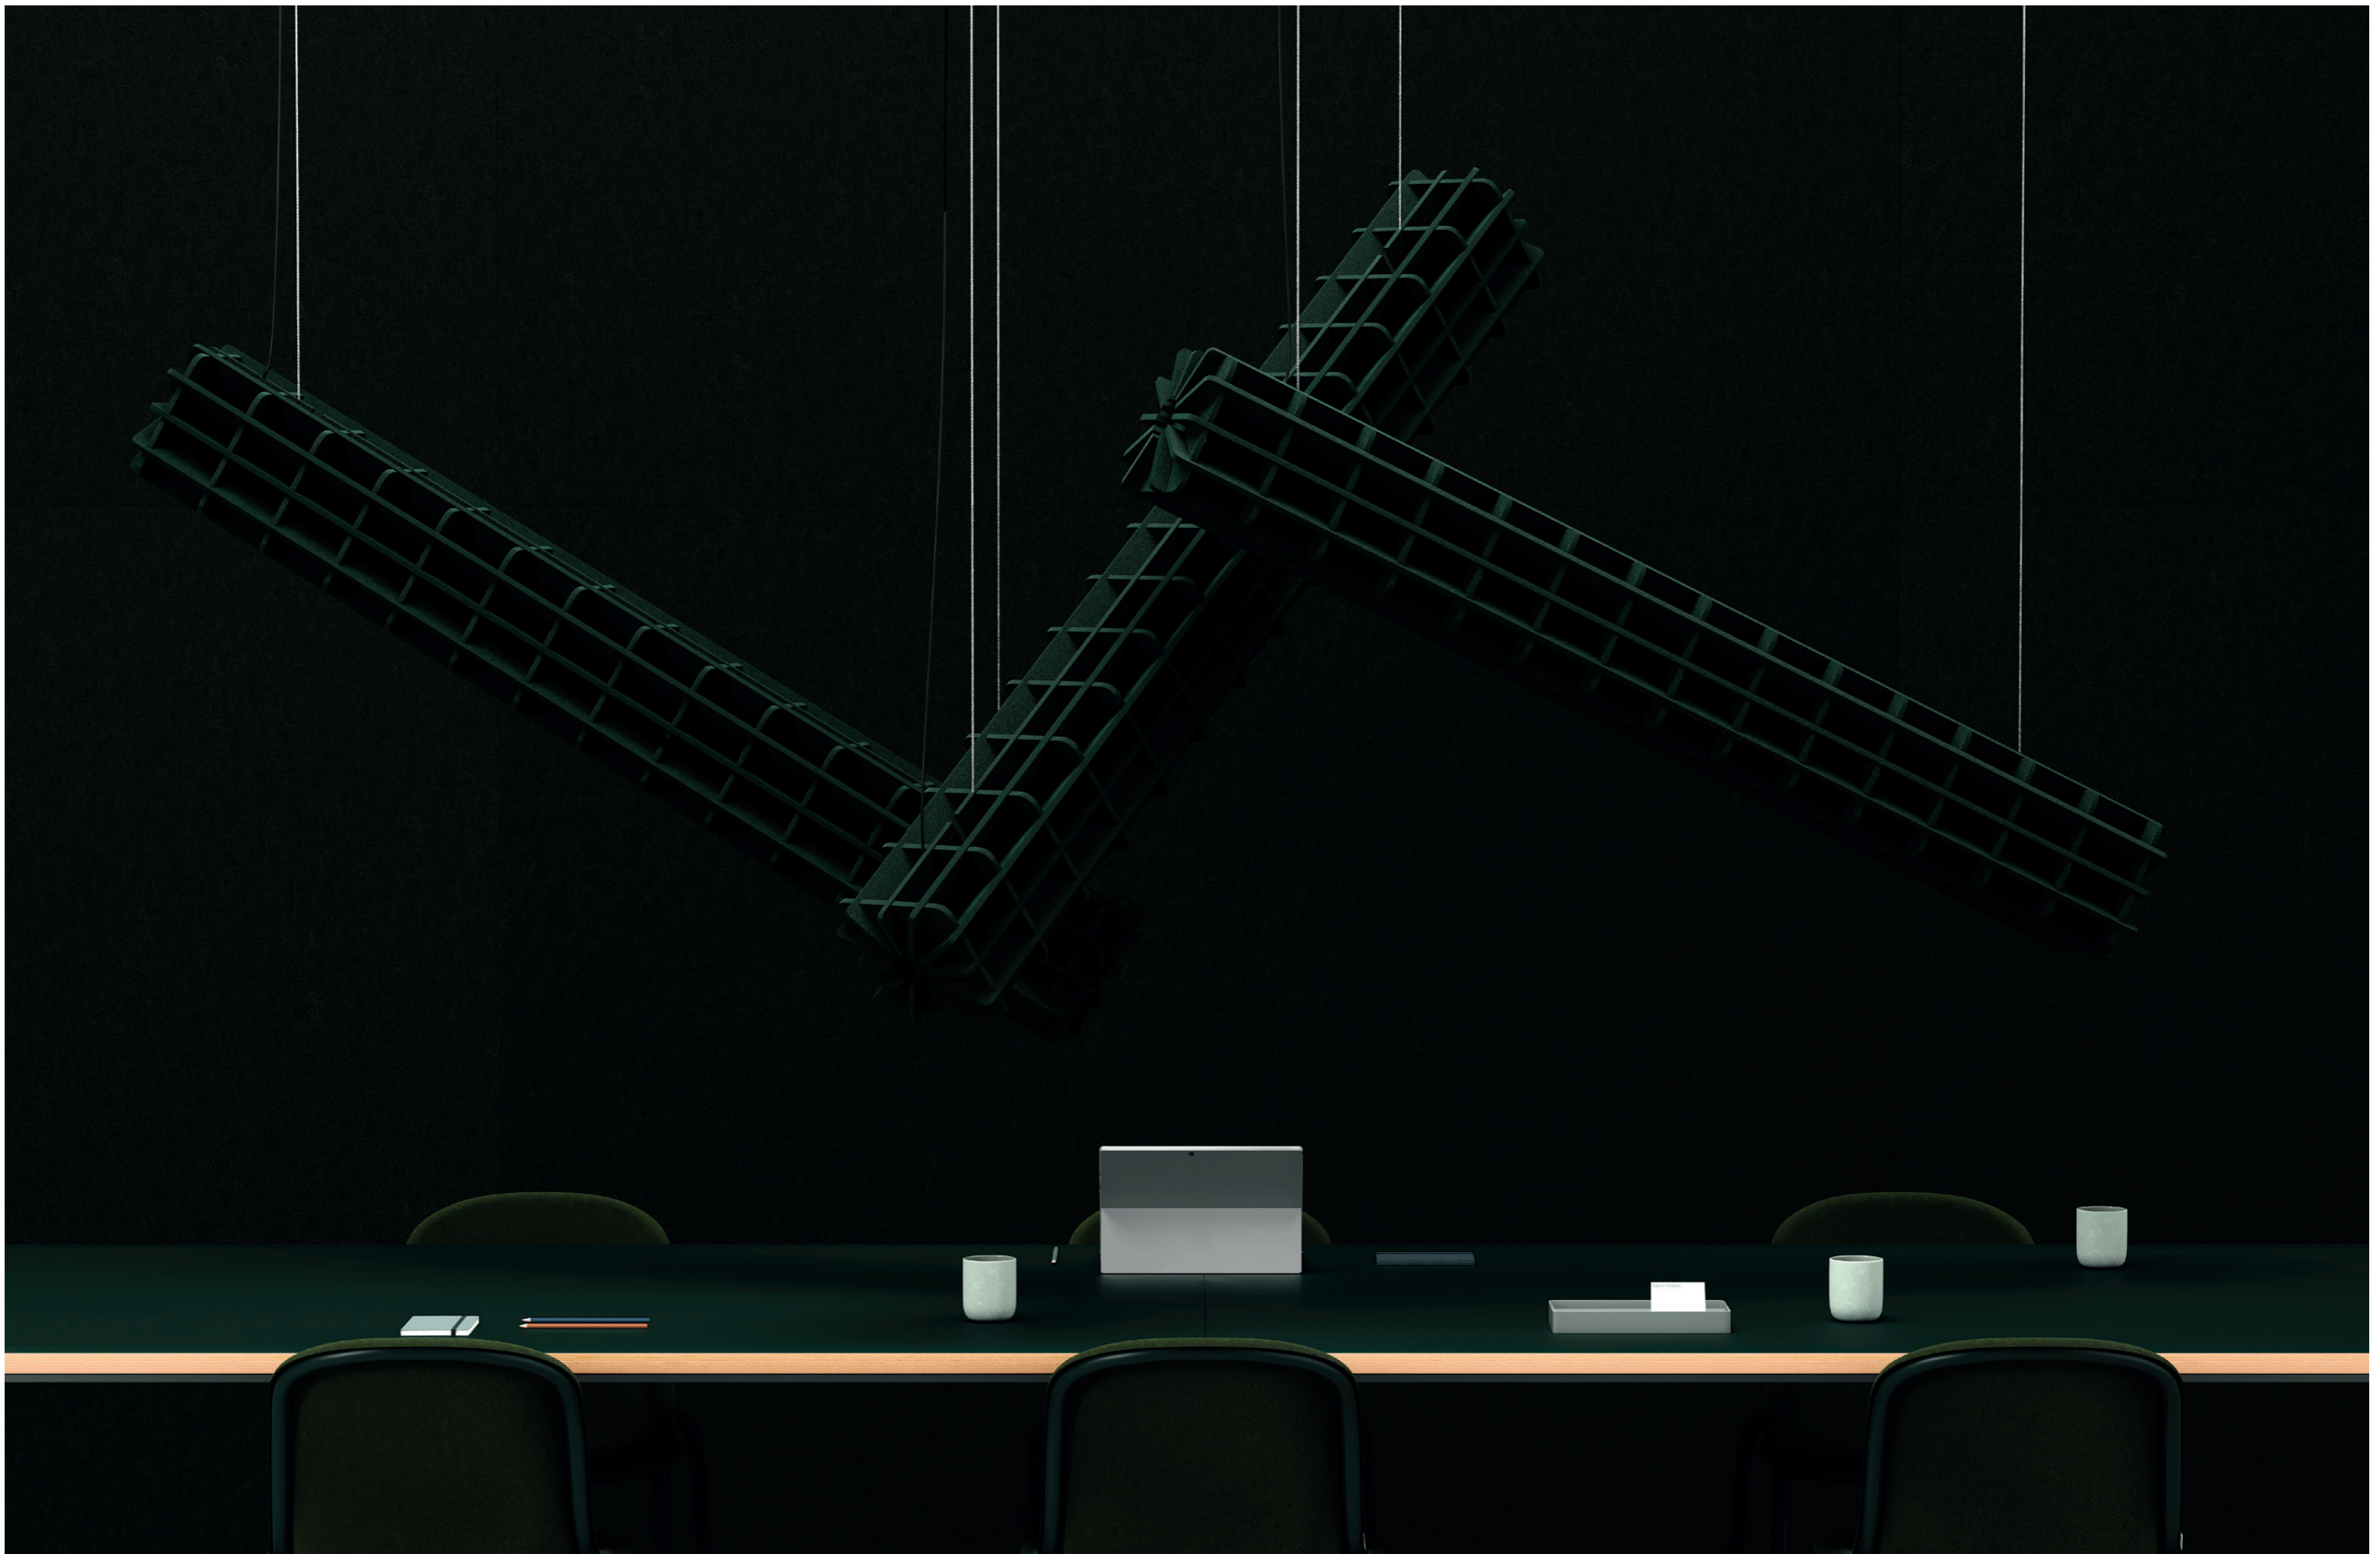

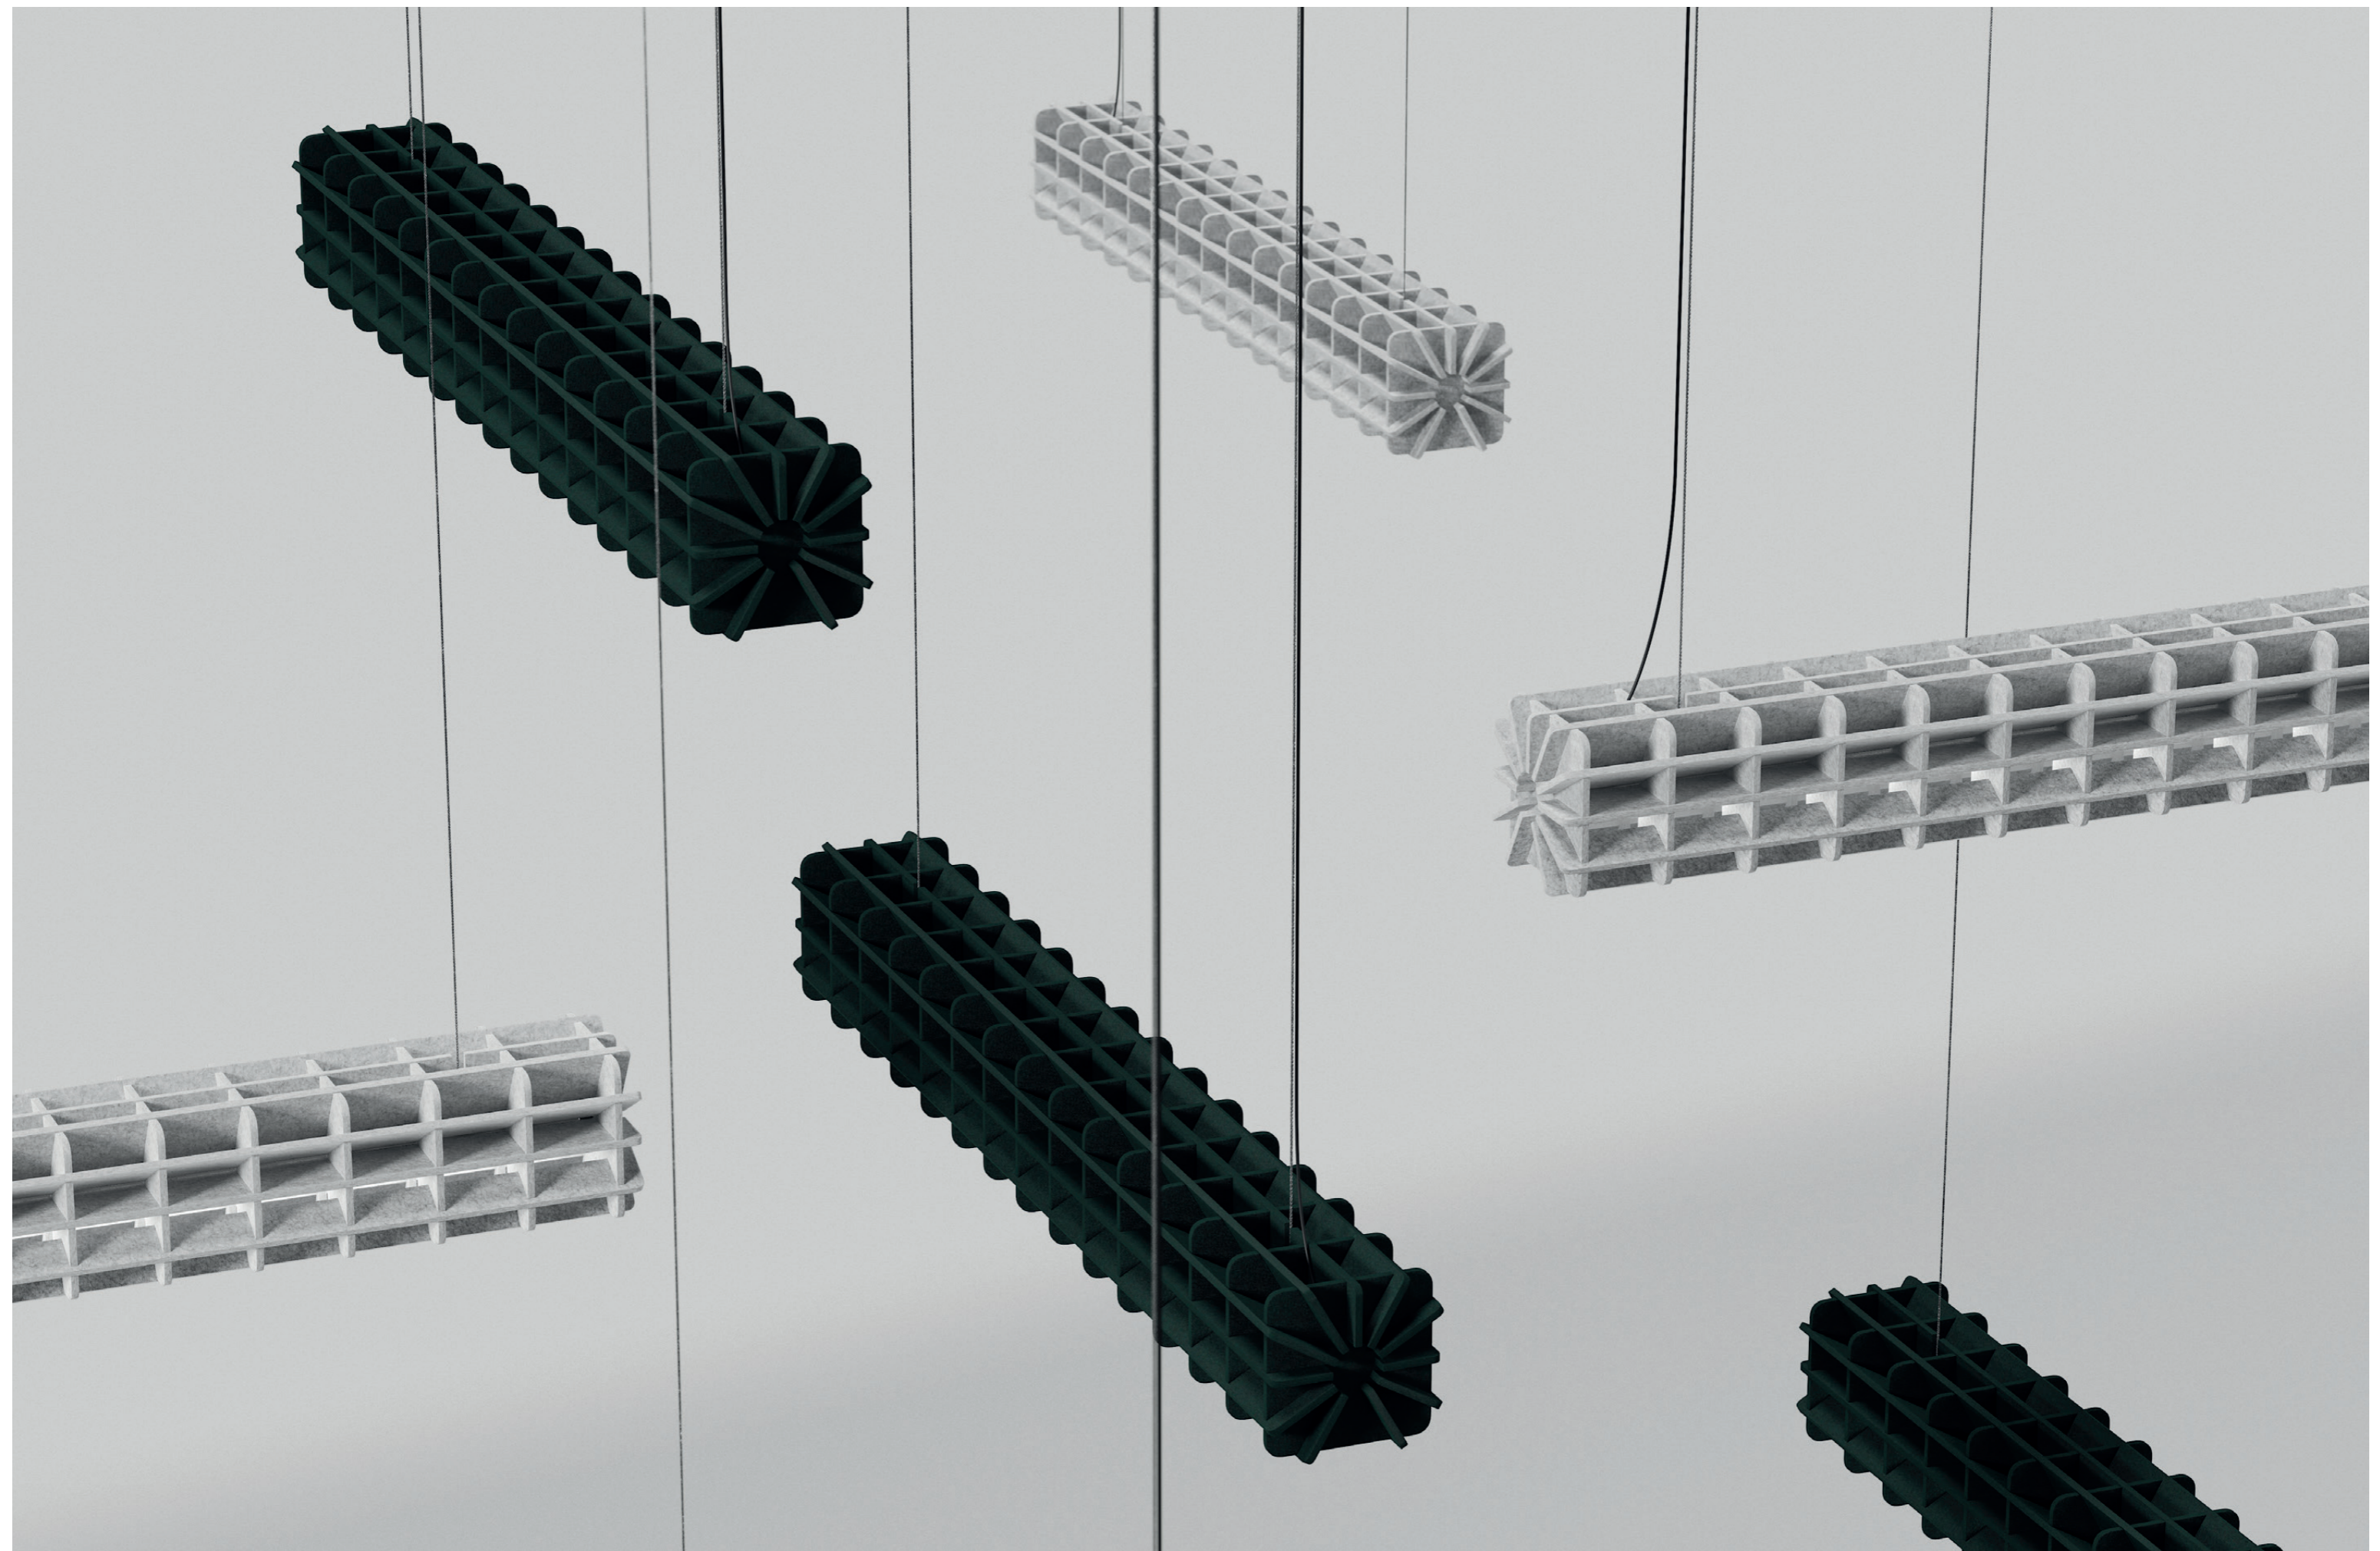

Radial

PET Felt Pendant

The design of the Radial lamp was inspired by 3D puzzles from our youth. All elements are cut from a PET Felt panel and puzzled into this lamp. PET Felt panels enables us to create countless 3D models and applications using this technique. The Radial lamps are constructed with an ABS fluorescent holder and a Philips ProCore 1500 mm LED TL.

MG

Series

The serving character of these tables offers a solution to every area, big or small. The small MG 1 can be fitted in between the cushions of our Arnhem Sofa to be used as a little work space or coffee table, whilst the big MG 3 turns any Arnhem Sofa into an office area.

Florian

Series

Its playful lines combined with minimal design gives it a sympathetic and playful appearance. The Florian Series have been purchased by the Stedelijk Museum in Amsterdam for its collection.
